17- Receiver Activation.

1 – General Introduction:

The XTV 25 is one of the latest and most advanced ATN Network Receiver available in the market now.

Right now, it can provide more than 700 Arabic channels from Nilesat, TurkSat, EUTelSat, Hotbird and ARABSAT including special channels, directly through the Internet.

The TV signal is broadcast in near-HD quality and can be received using an Internet speed of 2 Mbps, which are within the capability of most Internet connections available worldwide.

2– Features:

The XTV 131 supports 2 different type of connections.

1- Composite Video

2- HDMI Connection

3- Digital Audio Out.

You can use any type of the 2 connections listed above to connect your box to the TV. You can also connect the Composite & HDMI connection at the same time.

The Receiver provides an output of 1080I, 1080I50, 1080P24 & 1080P30 high resolutions for HDMI, and 720P,720P50 for near HD Quality Resolutions, as well as 576P,480P,480I,576I are available for the HDMI & Component output.

Note: setting Any of the high resolution output won't affect the resolution of the S-Video, Composite output, this will always 640i, which can be used if for you set up an unsupported output for the TV, and the screen goes blank. Refer to the troubleshooting section for more information.

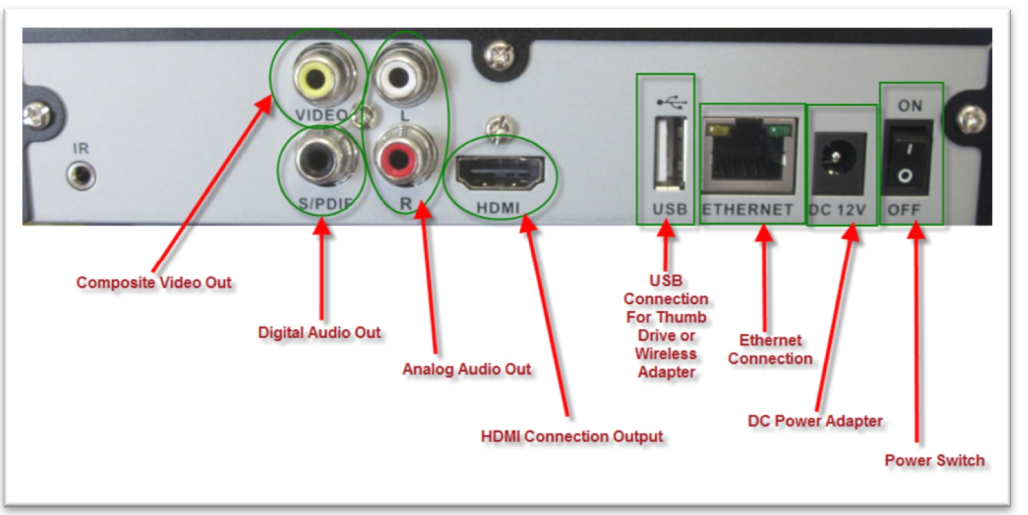
3– Connections/Wiring Diagram:

Below is a screenshot for the Receiver front & Back display.

Back View

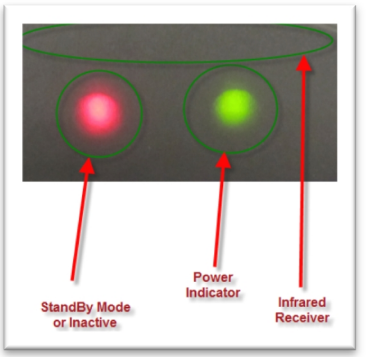
Front View

A Closer View for the back panel of the receiver:



A Closer View for the Front panel of the receiver:

To know the status of the receiver, check the power/ (on-off-standby) indicator as shown in the screenshot below:



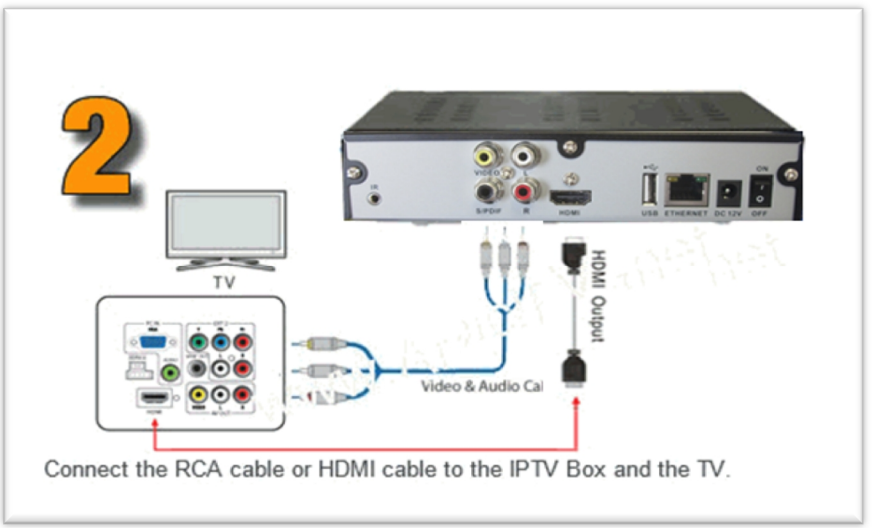
If the On/off/Standby indicator is red, this means that the receiver is not active.

If the receiver stays on one channel for more than 4 hours, the receiver will go into standby mode and the TV screen turns black; but the on/off/standby indicator will still be green, this means that the receiver is in stand-by mode. If that indicator is red, this means that the receiver is off, and needs to be turned on by pressing the power button on the remote control to bring the receiver back-on, or turning off then on the switch from the back, this will reboot the receiver and turns ON again displaying channel “1” from the “Channels” menu.

Note: When the receiver is switched off and if turned on again, the channel goes back to “1”, so you need to press the “OK” button and scroll to the channel you want, it does not memorize the last channel viewed when the receiver is off. This default setting might be changed in later firmware.

A Simple wiring diagram to connect your receiver with the TV is shown below:

Connect your TV Box to the Internet modem or Internet router

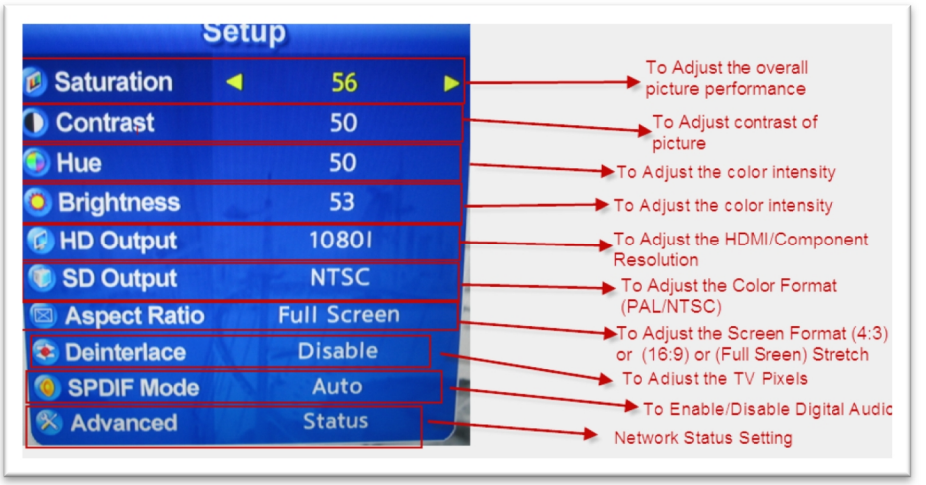


Connect the RCA cable or HDMI cable to the IPTV Box and the TV.

Plug in the power cable to the TV Box and turn the power button.

Activate Your Receiver With the activation code..

4– Setup Menu Setting:



The Setup menu can be accessed by pressing the "Setup" button on your remote to access some advanced settings for the receiver. To scroll through each item, use the up/down arrow keys, to adjust the value, use the left/right arrow keys located around the "OK" button.

1- **Saturation:** If you realize that the picture is not clear or not saturated enough, you can adjust that setting; a preview will apply immediately in background. Once you confirm you are satisfied with the new setting, press the "OK" button to save the setting, otherwise, the previous setting will be reverted back.
2- **Contrast:** If you think that the picture has too much contrast or too low contrast, use that option to adjust it accordingly.
3- **Hue:** This will be used to adjust the level of color of the picture, if you find that the picture does not show full color on the TV or too much or dim colors.
4- **Brightness:** Adjusting the brightness of the screen
5- **HD Output:** This setting can only be adjusted if you are using HDMI or Component Cables. On S-Video/Composite output this does not apply. If you are using HDMI and you set it to an unsupported resolution by your TV, and the screen turns black, then you can use one of the above Composite/S-Video connections to revert the setting back and then reconnect the HDMI or component cables again.
6- **SD Output:** This can be used to adjust the color format, in USA; this setting should always be NTSC, in other Europe/Middle East countries this needs to be set to.
7- **Aspect Ratio:** If your TV does not support widescreen, or if your TV does not show the screen fully, you can adjust this setting to one of the 3 available settings, (4:3, 16:9, Full Screen), this can also be accessed on the fly by pressing the Change Aspect Ratio "A/R" button on your remote.

8- **DE interlace:** This setting should not be adjusted if your screen is clear, because this can only be used in some cases when the screen flickers.

9- **SPDIF Mode:** if you are using any of the digital audio connection (coaxial or optical), then you can permanently set it to ON without having the system detect it, otherwise you can either set it to Auto or OFF mode to permanently disable digital audio out.

10- **Advanced:** This will actually show you some settings like receiver Serial Number, MAC Address, Network IP Address, Subnet Mask, and Gateway. This is a great troubleshooting option to see if the settings are correct and to find out if the receiver is connected properly to the internet. To access this menu, simply select this option and press the "OK" button to view these settings, to exit that page, press the setup button.

Note: To exit out of the setup menu, the only way to do this is to press the setup menu again and it will take you back to your default home screen.

- Wired/Wireless Connectivity:

To connect the receiver to the network, 2 possible connections can be done:

1. **Wired Connectivity:** This connection is set by default and the ip address is set to DHCP, where no further action is required if there is an issue with getting an auto ip address. To change that setting, press the "setup" button, then go to "Networking" section, and click on the "Network" sub-menu.
   Scroll using the remote control to the right panel and move the arrow key to "DHCP" section, and select "OK". The menu will change to "manual", then enter the manual ip address settings manually and press the "Red" button to save settings, to cancel press the "Back" button, to switch back, press "Manual" again.
2. Wireless Connectivity: To connect using wireless, press the "setup" button, then go to "Networking" section, and click on the "Network" sub-menu Scroll using the remote control to the right panel and move the arrow key to "Wired", then press the "OK" button, the menu will change wireless, and the receiver will start looking for "SSID" from the list. Once you find the SSID you need to connect to, scroll using the arrow keys to that SSID and click OK, then enter the security code (if any), and press the "Red" button on the remote to save. After changing it, restart the box and you should be connected.

   Note: (The USB Network adapter must be connected to the receiver to use the wireless feature, otherwise you will get a message saying that the USB adapter is not connected)

5– Remote Control Operation:

To use the remote control, follow the instruction above about each Button and how to use it. You can use the remote for the full operation of the receiver.

1- **Home Button:** Will return to main home channel "1"
2- **Power Button:** To Turn On/Off Receiver.
3- **Mute Button:** Will temporary mute Receiver Audio.
4- **Back button:** will return to previous menu.
5- **Page Up/Down buttons:** will scroll the channel/Favorite menu one page at a time.
6- **Guide Button:** will display the package menu.
7- **Info Button:** will display more info about the channel being viewed.
8- **Channel Buttons:** For changing channels or Activation Code Input.
9- **Back Space Button:** To delete previous character on screen.
10- **Volume Up/Down:** To Adjust volume level
11- **Channel Up/Down:** To Change Channel Numbers sequentially.
12- **Up/Down – Left/Right** Navigation Buttons.
13- "**OK" Button:** to access the channel menu or confirm any setting.
14- **Remove Favorite Channel** or access YouTube video.
15- Add To Favorite Channel
16- **Hide/Unhide left column** "Channel" menu.
17- **Move Favorite Channel** or Recording Menu.
18- DVR Buttons: Includes F.R , Play/Pause, F.F.,Prev, Stop, Next Buttons.
19- Aspect Ratio Button: Adjust screen fit 4:3, 16:9, Full Screen, Stretch.
20- Reload Button: will load back the default page "1" similar to the home button but this can only be used if you are having some issues with channels
21- S**etup Button:** Will allow you to access the setup menu.

6– Available Packages:

Currently packages are bundled into 8 Major Packages, and 2 Sub Packages.

The Packages are as follows:

Packages: ***Arabic,ART,Indian,Turkey, Afghanistan,Pakistan,Kurdish,Iran,Africa.***

The other 2 Packages are as follows:

1- "ATN All Channels", which includes all available channels.
2- "ART" Channels

With one subscription you get access to all the 8 packages for only $35/month.

ART Package comes with separate subscription for just $5/month.

7– Available Channels:

Due to the large amount of Channels available, and to the change of channels every time by adding more channels, the list of channels below might vary from time to time, if you are interested to see what new channels are added, please visit our website at: http://www.iptvtech.net to get a list of the latest channels.

To Access the Channel Menu, Simply Press the "OK" button, and a pop-up box will display as follows:

The left menus are Channels Available in each entire package.

I- To add a channel to the Favorites, select the channel you want from the left menu where the selected channel has a red rectangle around it, and then press the “Green” button, and it will be moved to the Favorites Menu.

II- To remove a favorite channel, point your cursor to the right menu, and select the unwanted channel by highlighting it in “Red”, and then press the “Red” button on the remote, and the channel will be removed.

III- To move a channel up or down on the favorites menu, select the channel you want to move on the right menu, and press the “Blue” Button on your remote, then scroll to where you want the channel to be moved and press the “OK” button. This will move the channel to that channel number you selected. If you can’t see the channel, then press the “Reload” button on your remote, and the channel will re-appear normally.

IV- To hide the left menu, press the “Yellow” button on the remote, and you will only see the favorites menu only.

Note 1: The channels/Favorite management buttons can only be used when the pop up window is displayed, it will function for youtube & DVR feature if it is used outside that pop-up menu.
Note 2: The new channel list might not be always accurate, it might take time to update, but you can go to the site and take a look and compare between this list and the list of channels on the website for more accuracy.
Note 3: When more channels gets added, the channel number will change, so if you find out that the channel number you entered should show a specific channel and not showing your favorite channel, then you have to go back to the left menu, find the new updated channel number, and add it back to your favorite menu and move it using the "Blue" button to the channel number you used to.

Note 4: To watch a channel, select the "OK" Button on the highlighted channel.

Note 5: "Time shift" beside the channel name indicates a pre-recorded channel shifted by 6 hours.

8- Available Subscriptions:

Subscriptions can be purchased in 4 different options For Arabic & ART Packages.

1- Every Month.
2- Every 3 Months.
3- Every 6 Months.
4- Every 12 Months.

Purchasing Arabic Package, will allow you to access all channels available (Arabic, Persian, Turkish, Indian, African, Pakistani, Kurdish) except the ART channels which can be purchased separately.

Purchasing a 12-Month Subscription will save you approx. $50 less due to the special offer that comes with the package, with Free ART Channels as well.

9- DVR Operation:

Currently the DVR option is not fully functional and is in the process of development, but it works with limitation of 20 min recording at the time being.

To use the DVR feature, a USB Thumb Drive that is fully formatted on windows 7 platform must be used. If the thumb drive is not properly formatted or is not formatted XFS file system, you will get an error message on the screen when you try to record or press any of the DVR features.se

To watch a recorded event, follow the instructions below:

1- Plug the USB Thumb Drive in one of the 2 USB ports on the box.
2- From the remote control use the following buttons to control the DVR operation:

On the remote control, the playback features are:

a) The **Back & Next** Buttons are used to navigate through the entire contents of the USB Thumb Drive.
b) The **RR & FF** is used to move the beginning or the end of the recordings.
c) The **Play/Pause** Button is used to play existing recordings as well as pause any recording.
d) The **Stop** button that will stop playback or recording.
e) The blue button will set the recording feature.

A Screenshot of the Recording Feature is as follows:

To Record an event,

a) Press the **blue** button once while you are watching a channel.
b) A pop-up window will display with 2 options as shown in screenshot above, it can be set to start recording now, or based on a schedule (start & end date/time) as well as the date for the event.

c) After selecting the recording time, press the **OK** button.

To cancel and go back to previous page, select the "Cancel" Button and click "OK"

If the recording was set to record now, the event will start to recording and a small red icon will display on the corner of the TV indicating that recording is in progress. To stop the recording, simply press the "**Stop**" button or Pause Recording, press the **play/pause** button. To resume recording press the **Play/Pause** button again.

If the recording was set on a schedule, then the recording will wait until the date & time set, and stops when schedule end date has reached.

On both cases once the recording is complete, you can playback the recording by pressing on the **play/Pause** button, and the playback will start from the beginning.

If more than 1 recording was captured, you can skip one recording at a time by press the **Back & Next** buttons accordingly.

Press the **R.R & F.F** to move to the First or last recording on the USB Drive

If you need to temporary stop the playback at any time, simply press the **Play/Pause** button and the picture will pause, press the same button again to resume playback.

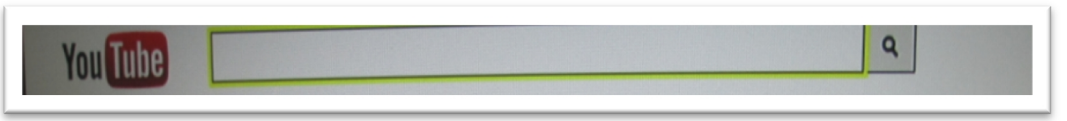
*Note: because this feature is still under development, it is only limited to a **20 min** recording time limit only, and it will stop as soon as this time limit is reached. Also make sure the Thumb Drive is large enough to fit the recording.*

***Upon estimation, a 1 Gig Thumb Drive can record up to 15 mins of recordings**.*

10- New Features:

One of the exciting features in this receiver is that it can allow expansions to be added to it by just restarting the box one new firmware is release. This will include all firmware, where it can apply to the box on the fly directly from the provider.

1) Latest feature allow you to watch youtube videos, this feature is accessible by clicking on the red button at no extra cost to you.



You can use the remote control to type inside, alphanumeric characters and search for any of video, and watch it directly on your TV. This feature can be accessed by pressing the “red” button while watching any TV channel.

After entering the string you want, point the arrow keys to the search button and click on “OK” and then scroll to your favorite video and press the “OK” button again will open the video. To exit out of the video and return back to your TV, simply press the “Home” button on the remote and it will take you back to your original Channel page.

2) You can plug a USB thumb drive inside one of the USB ports, and by default, the receiver will record live video on any channel you are watching up till the usb drive gets full, then it overwrites the recording to new recording, depending on the capacity of the drive used. This feature is the instant time shift feature. This Is useful if you were watching a channel and you missed anything, you can simply use the DVR playback feature listed in section “9” like “Back”, ”Next”, ”Play/Pause” buttons on the remote control. To return back to the live channel press the “Stop” button.

3) Another new feature is called “***ATN Live TV***”, this is a new feature that has been introduced that allows you to watch most of the live channels directly on your “iphone”, “ipad”, “ipod”, and even “Android phones”, as well as watch these exciting channels. Unfortunately, this is not a free service and it requires a separate subscription if you are planning to use it. You must be a current Subscriber to use this feature.

If you are interested to use this feature, please call us at our number:

(201) 470-4333 to know more about pricing & requirements to use this feature.

It can be purchased for: 1 day,7 days, 30 days, 3 months, 6 months, 12 months.

Only eligible subscribers can use this feature with active subscription.

Once purchased, you will be provided with a user name & password to use and you can enter those credentials on your mobile device and start to watch the channels.

11- Coming Soon Features:

Future Plan Enhancements and features include:

1- Channel Availability and Stability improvements.
2- Additional Channels & Packages to be added.
3- Fully Functional DVR Feature with lots of Features.
4- Adding more features to the Receiver

12- Available Accessories:

From the wiring diagram this receiver supports only wired connectivity to the internet, it does not include a wireless. But if your receiver and the Router are away from each other, and there is no way to run a network wire between the TV & the router, the only possible way is to use the Power Line Adapter that can be purchased from any computer store, or it can be purchased From Us. The Power Line adapter will allow you to use your existing power line wiring to transfer internet data over the power wires to connect internet to your receiver.

Most Recommended Types:

1- Netgear
2- Linksys
3- D-Link
4- TP-Link

The speed should be at least ***200Mbps*** to get a full non-intermittent picture from the internet to the receiver, any device that does not meet the min. requirement or type, will display an unstable picture and we won't be responsible for any issues caused by the other device used.

a) **Power Line Adapter:**

It comes set of 2 devices, connect the 1st adapter to the router, and the 2nd adapter to the receiver.

All you need is to plug the 2 adapters in any power source outlet.

Note: The adapter should be plugged directly on the wall, it should not be connected to any extension cord or surge protector, as this won't guarantee the operation of the devices. Read the device manual of the device on how to use them.

b) **UHF Remote Extender :**

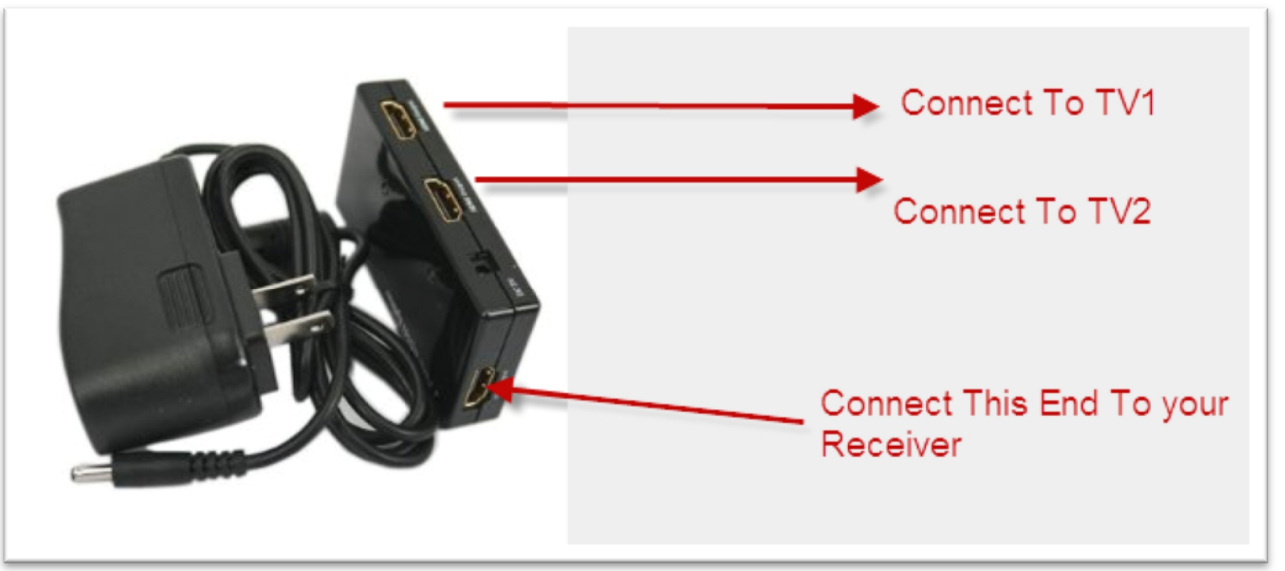
Currently, the remote control that comes with the receiver is only set to use infra-red signal to operate, but if UHF operation is required so that the remote can operate without having to point it directly to the receiver, a uhf remote extender needs to be purchased to allow the remote to be used in any room around the house.

This type of extender can be used by replacing the supplied battery with one of the existing batteries in the remote, and pointing the transmitting sensor of the saucer to the infrared receiver on the IPTV box, which is located on the left side of the IPTV box.

c) HDMI Splitter :

HDMI Splitter can be used if you want to split the HDMI signal to 1 or more TVs at the same time,

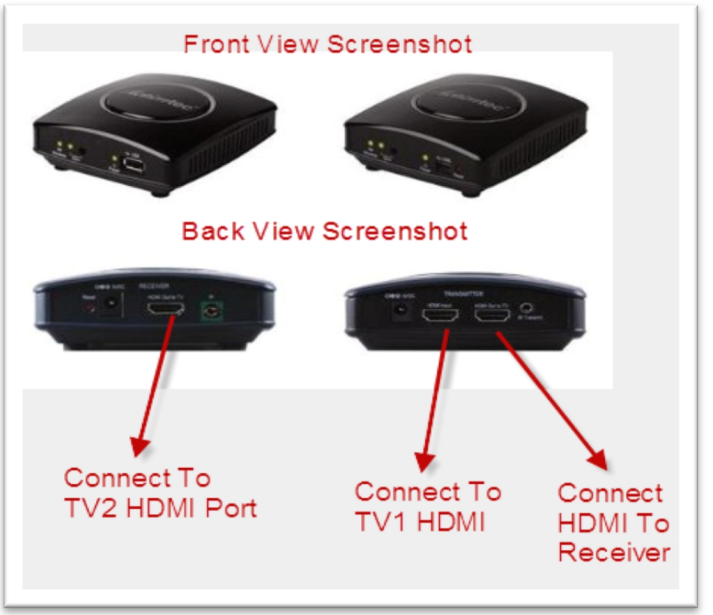
The Screenshot below is used to connect 2 TVs to 1 Receiver.



If you need to connect more TVs, there are splitters in the market that can split the signal to 3 or more TVs depending on the need.

d) Wireless HDMI Transmitter/Receiver:

If you need a way to connect 2 or more TVs in 2 different rooms in your house where it is not possible or not easy to run a wire between the receiver and the 2nd TV, the best way is to buy this type of Wireless HDMI transmitter/receiver below. This is a very sensitive device; it can work in some cases.



If you are interested to purchase this device, call us and we'll explain to you if it can work with your home structure. In order for the device to operate properly, the front view of these 2 devices needs to be hanged on a wall in an open space; otherwise you will not get a signal.

This device works on a 2 story building structure as long as there is not too much interference from the surrounding area.

The maximum transmission distance is approx... 100 ft. distance.

The signal quality is, but it is very sensitive to motion, so it should not be put in a location where it can be susceptible to motion.

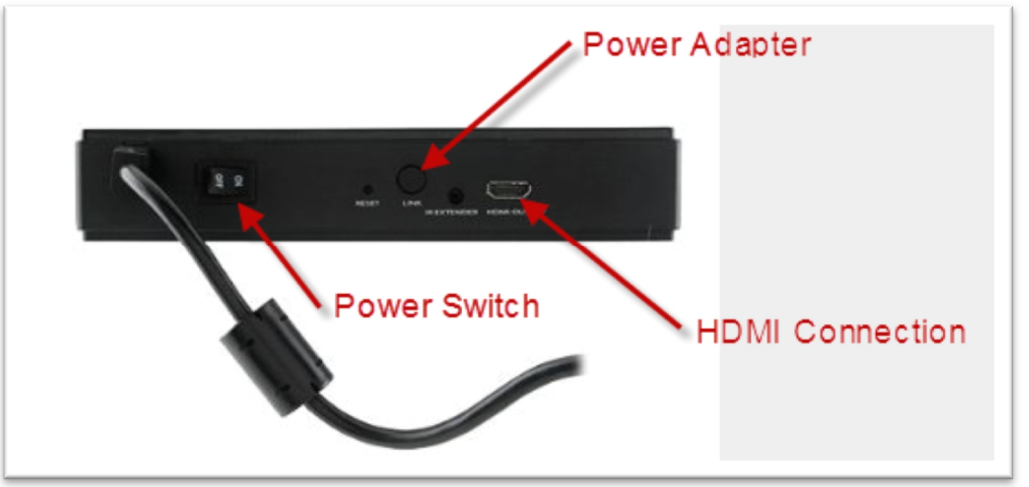
If you want to connect a 3rd TV, you need to purchase an additional receiver and connect it to your new TV using the same process above.

The exciting feature about this that it comes with t remote extender cable so that you can control you're remote wirelessly as well without additional devices.

e) HDMI Power link Audio/Video Transmitter/Receiver:

If you require a device that can use the Power Line to transmit the Audio/Video signal in a same room, then this device is the proper one for you. It can only be used in the same room as because due to the wiring connection in the house. For more information, please contact us to provide you more details about this device.

This unit has 2 connections:



These 2 units come together and can be used in conjunction with the HDMI Splitter in section C.

f) Wireless Audio/Video Transmitter:

If you need a regular wireless audio/video transmitter that uses the Composite Audio/Video connection without having to use the HDMI connection to connect to a 2nd TV, then this device is the right for you.

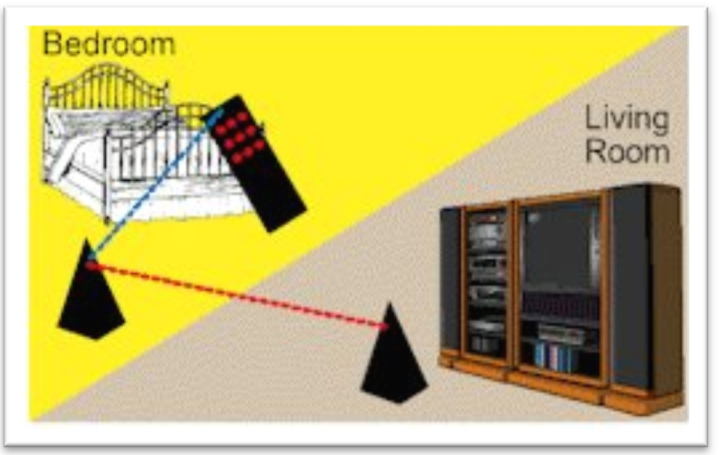
Wireless Transmitter and Receiver Kit: 5.8 GHz, Video/Audio, 7 Channels Selectable. This device is the perfect device to get a good signal at the same time not interfering with any other wireless device because it run on the 5.8 GHz frequency. It has 7 channels selectable if you decided to add more than 1 receiver to this package. You can use this device in conjunction with HDMI to get 2 simultaneous signals to 2 TVs without the need of any additional device, but the signal is only using composite output.

g) Infrared Remote Control Transmitter/Receiver:

If you need a remote extender that extends to your 2nd TV that is located anywhere around the house, then the device below is the right fit where this does not use UHF,

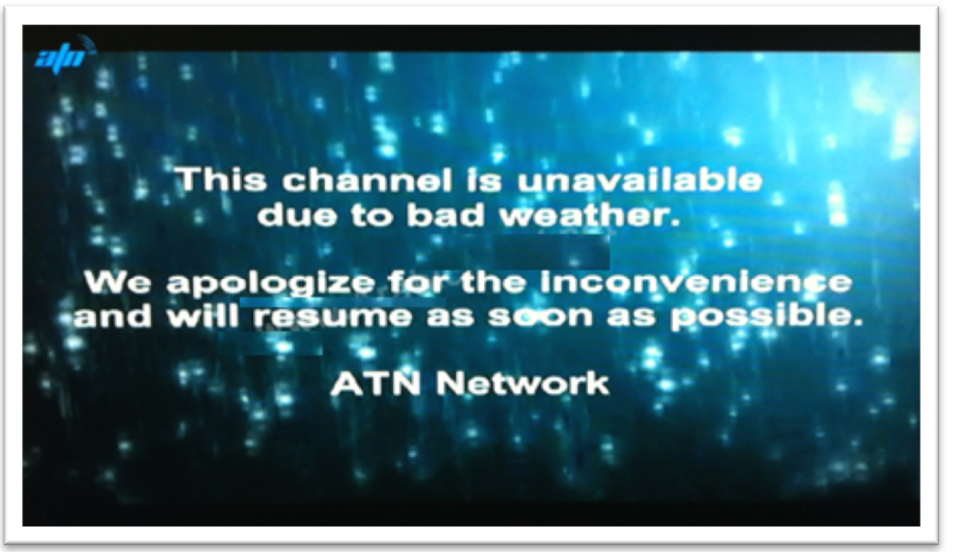
You connect the transmitter cable to your Receiver's infrared receiver, and connect both devices to the power line. All you have to do is to put the 2nd device (Receiver) close to the 2nd TV and point your remote to the receiver to send the signal to the Box.

A good example would be similar like this one:



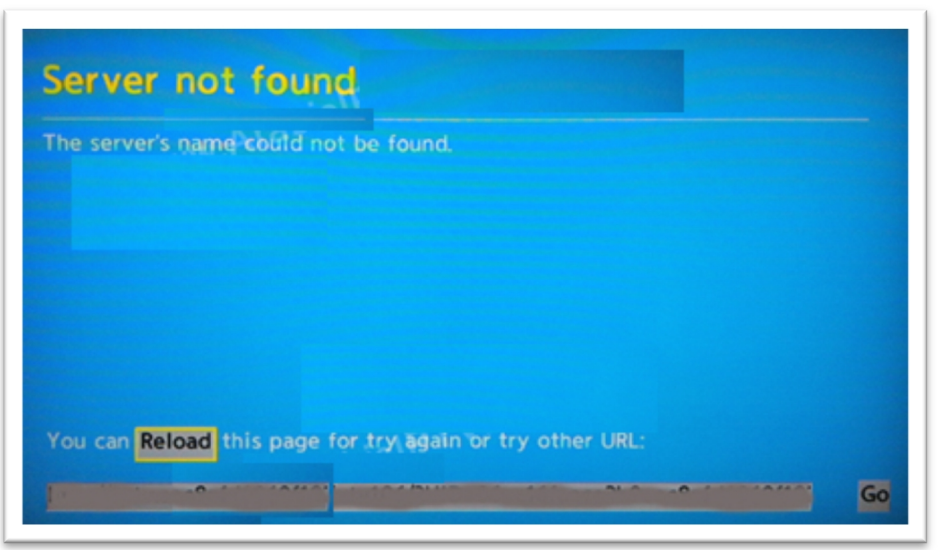
13- Troubleshooting Error Messages:

a) You will see this Error Message when ATN has bad weather and/or the signal is from the satellite is low. The picture will come back very soon.



This channel is unavailable
due to bad weather.
We apologize for the inconvenience
and will resume as soon as possible.
ATN Network

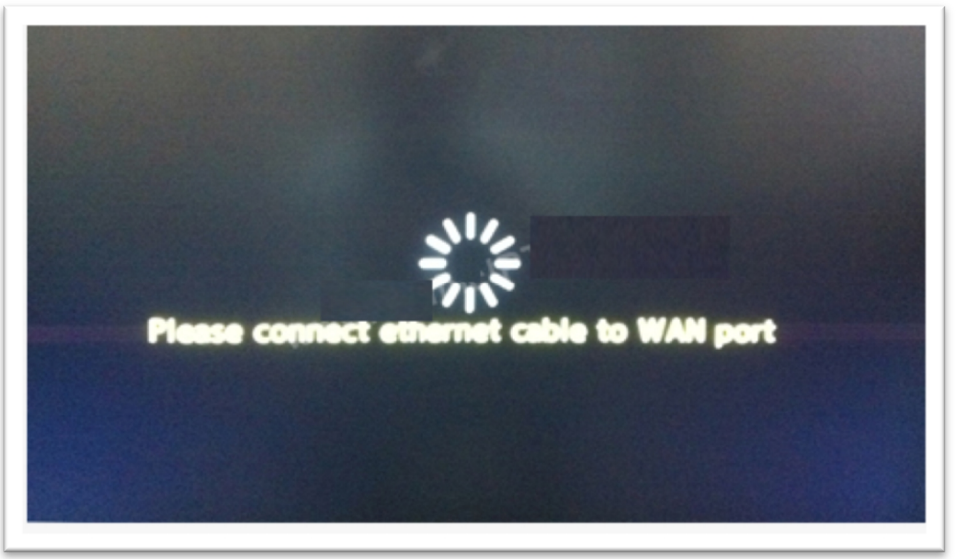
b) This error message means that the connection between your IP TV Receiver and the Internet is lost. Make sure the Internet cable is plugged into the IPTV Receiver and Internet Modem or Internet Wireless.



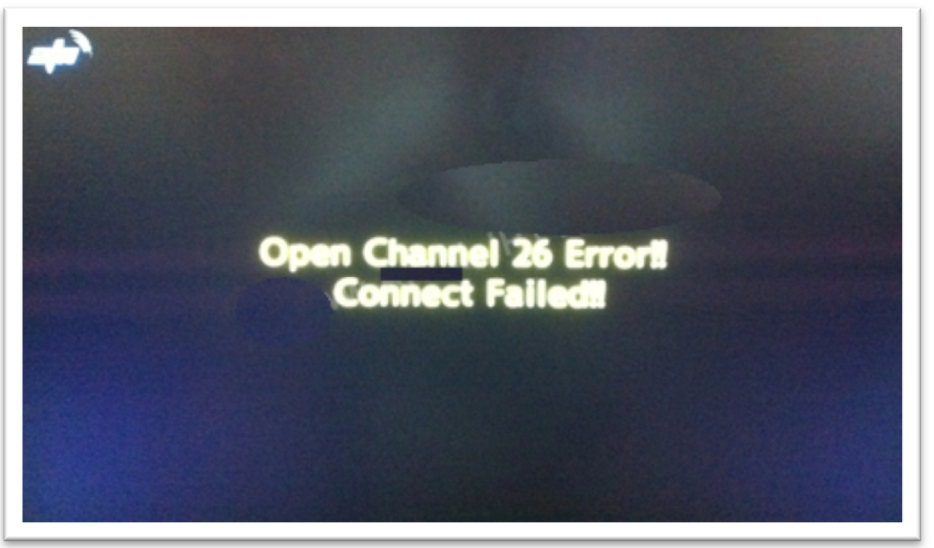
To try to resolve this issue, try 1st to reboot your Internet Modem and Wireless, and then reboot your IPTV Receiver.

If you still see this error message after doing the steps above, please contact us to help you resolve this issue.

c) This error message means your IPTV Receiver is not connected to the Internet Ethernet cable.



d) This error messages appears on the TV if there is internet disconnection on the customer side. Please contact your ISP, only if you receive this message on all channels.



If you are having any other issues, call us so we can help you out. If you want to call us, please make sure that your internet connection is working, and you can access websites using a regular PC. And make sure also the cables are properly connected and there is no problem with the port or cable that runs between the router and the receiver.

Note: if you are having a choppy picture when trying to access all channels on your receiver, then you might be experiencing network connectivity issues, to verify, go to this website: http://www.speedtest.net and run the test there.

If you get a speed of less than 2 Mbps, then there is an issue with your internet connection, and you need to check with your ISP to see if the problem is with your cable modem or router or your ISP. Once the issue has been resolved, then the picture should display normally and you should get a clear and stable picture afterward.

14- Billing Questions:

If you are having issues with a charge on your credit card that you think it is incorrect, or the improper amount was charged, or any billing questions whatsoever, you should contact the billing department immediately, billing department is available between 10 am till 7 pm Eastern Time (Monday Through Friday Between 10 am till 7 pm).

The Billing Department Contact Number is: 1-855-872-4788

You need to contact this number if also your subscription expired, or if you are having trouble activating your receiver or if your credit card information has expired.

When calling please have the following information ready:

- Your Full Name
- Your Receiver's Serial Number located on the bottom of the IPTV Box.
- Your Receiver's MAC Address (if required) located on the bottom of the IPTV Box.

Note: The Receiver serial number starts with XVxxxxx where the "X" is the digits on the receiver.

15- Technical Questions:

If you have any technical questions related to accessories to use, channel information, or any other error messages that is not listed in section 13, please feel free to call us so we can try to resolve the issue for you.

Our Technical Department is: **(201) 470-4333** and ask for “Mr. Roland”.

Technical Support Hours: M – F (Monday Through Friday) from 9 am till 8 pm Eastern Time.

Note: Receiver is covered under warranty for 1 year, for any issues with your receiver, call us and let us know, so we can give you the address to where to send the broken Receiver and we will ship a replacement box instead to you as soon as we can after we receive the broken Receiver and the cost to fix or replace if applicable.

16- Contact information:

To contact us about any other questions, such as new channels, or suggestions, we would be glad to listen to your feedback and we will try our best to meet most of the requirements if possible.

Please call us on: **(201) 470-4333** and ask for “Mr. Roland”.

Office Hours: Saturday: 10 am till 2 pm Eastern Time.

17-Receiver Activation/Activation Process:

After you purchase your receiver, the receiver requires activation. Once Receiver purchased, we will be notified of the date & time the receiver purchased, and we need time to process your credit card and verify all information are correct. Normally, we need between 24 to 36 hours to receive the activation code. After we finish with this process you will receive an email with your activation code that you can use to activate your receiver.

Once you receive your activation code, the process takes less than 5 mins to activate and it is straight forward.

Once you turn on the receiver after connecting and verifying that all cables are connected properly and securely, and once the receiver's Operating system loads successfully:

You will be see with the screen below asking for activation code:

Enter Activation Code Here And
Press OK using Your Remote
Your subscription has expired - please enter activation code
OK
MAC address is E0915363A4CB and your serial number is
XV0624H119002474. We speak Arabic and English.

Enter the activation code provided into the highlighted box above.

Note: make sure the digits entered are all Numeric, and press the OK button after each digit to make sure that it is saved there, once you press on every digit you will get a drop down list containing characters & digits, you should only select the digits by using the Up/Down arrow keys, and once you highlight that number, press the OK, then the selected digit will show up in the box, enter all digits provided, and once you verify that the number is correct, press the "OK" button, then you get a confirmation popup window, that your receiver has been activated. And

you can start watching the channels. If you get an error message saying that the number entered was incorrect, you can have up to a max. Of 10 incorrect attempts, after those 10, the receiver will be locked and you won't be able to re-activate it again up till 1 hour and you have to turn OFF and then ON again. So, in order to avoid this issue, if you enter the code twice and it didn't work as provided, then please call us to resolve the issue on: ***(201) 470-4333*** *during regular office hours*.

Note: if you entered a digit incorrectly, you can delete it by using the "Clear" button on your remote.

You will also get this screen if your subscription or your credit card has expired. You need to call our billing department to provide the updated information, and you will be provided with a new activation code to re-activate your receiver.
